

UN closes the books on decade-long nuclear probe of Iran

16/12/2015 21:07 by admin

Vienna: The U.N. nuclear agency closed the books Tuesday on its decade-long probe of allegations that Iran worked on atomic arms, and Tehran proclaimed that it would implement commitments within weeks to cut back on present nuclear programs that could be used to make such weapons.

The probe had to be formally ended as part of a deal between Iran and six nations that involves the removal of economic sanctions. A resolution was approved by consensus of the 35-nation board of the U.N.'s International Atomic Energy Agency.

The move means that some questions about the alleged weapons work may never be resolved. Before the resolution's adoption, agency head Yukiya Amano told the board that his investigation couldn't "reconstruct all the details of activities conducted by Iran in the past."

At the same time, he repeated an assessment he made last month that Iran worked on "a range of activities relevant" to making nuclear weapons, with coordinated efforts up to 2003 tapering off into scattered activities up to 2009.

Chief Iranian delegate Reza Najafi denied such work, in keeping with his country's constant line during the protracted probe. In his statement to the board, and then to reporters outside the meeting, he said Tehran's nuclear activities "have always been for peaceful civilian or conventional military uses."

Noting that formal closure of the issue negates a series of critical IAEA resolutions against his country, he proclaimed Tuesday a "historic day" that opens the path to closer cooperation both with the agency and its member nations.

Despite Iranian denials, the U.S. and its allies continue to believe that Tehran did work on components of a nuclear weapon. But their overriding interest is moving ahead to implement the July 14 deal that focuses on limiting Iran's nuclear activities for more than a decade.

Najafi, the Iranian delegate, said that stage could be reached within "two or three weeks" although it was unclear whether that time frame would include not only Iran's declaration that it has met its commitment, but also IAEA verification that it has cut back or re-engineered equipment that could be used to make nuclear weapons.

The deal also calls on Iran to ship to Russia or convert much of its store of enriched uranium that is now at the level used to fuel reactors but could be further processed into the fissile core of nuclear warheads. Najafi said that process would be completed "within two or three days."

Once the agency confirms that Iran has met its part of the deal, most individual and international sanctions imposed on Iran over its nuclear program will be lifted.

A European Union statement reflected the will to move on. Unlike in previous statements, it avoided condemning Iran over its alleged weapons research and development program, saying only "we note" the agency conclusion.

U.S. chief delegate Henry S. Ensher was more critical. Harking back to standard language from Washington, he said the U.N. agency's assessment wasn't surprising, considering "Iran's long history of concealment, denial and deception."

Ensher also suggested the agency could again be called upon to investigate Iran, noting that the closure of the probe

doesn't prevent the agency from following up on "any new concerns regarding weaponization." Still, most of his comments were low-key and forward-looking.

The resolution ending the investigation was drawn up by the U.S. and the other nations that negotiated the deal with Iran – Russia, China, Britain, France and Germany.
