

Los Angeles is most traffic clogged city in world, San Francisco ranks 4th

21/02/2017 22:15 by admin

Los Angeles: Residents of Los Angeles lead the world in getting stuck in traffic on the way to and from work, according to a study.

Los Angeles is most traffic clogged city in world

Drivers in the California metropolis spent 104 hours each driving in congestion during peak travel periods last year. Moscow is placed at the second place with 91 hours and New York at third-place with 89 hours, according to a traffic scorecard compiled by Inrix, a transportation analytics firm.

The U.S. had half the cities on Inrix's list of the top 10 most congested areas in the world and was the most congested developed country on the planet, Inrix found. U.S. drivers averaged 42 hours per year in traffic during peak times, the study found.

San Francisco was the fourth-most congested city, while Bogota, Colombia, was fifth, Sao Paulo ranked sixth and London, Atlanta, Paris and Miami rounded out the top 10.

Being stuck in traffic cost the average U.S. driver \$1,400 last year and nearly \$300 billion for all drivers nationwide, Inrix said.

Study authors said a stable U.S. economy, continued urbanization of big cities, employment growth and low gas prices all contributed to increased traffic and congestion worldwide in 2016, lowering the quality of life.

It's not likely to get better anytime soon, wrote Bob Pishue, senior economist at Inrix.

"The demand for driving is expected to continue to rise, while the supply of roadway will remain flat," he said in a statement.

Pishue suggests that governments use traffic data and technology to make traffic move more smoothly while they consider additional road projects.

Of 240 U.S. cities studied by Inrix, drivers in Parkersburg, West Virginia., spent the least about of time stuck in traffic during peak hours at three hours per year.

Inrix said it analyzed 1,064 cities worldwide across 38 countries to come up with its rankings. Since Inrix doesn't gather its own data in either China or Japan, cities in those countries were not ranked.
